

# Student Guidelines for Responsible Use of Generative AI

A practical guide for responsible AI use in higher education

Use generative AI to support your learning, not to replace the thinking, skills, and responsibility your coursework is designed to develop.

## Ask all three questions before you use AI on coursework

Responsible AI use should satisfy all three. Answering one well does not answer the others.

### LEARNING & GROWTH

Does this use preserve the thinking the task exists to develop?

#### 1 Attempt the task first

Make your own attempt or outline before prompting. Then use AI to test your reasoning, explain a confusing step, or suggest alternatives.

#### 4 Preserve skill development

Name the skill the assignment is meant to build, such as writing, coding, or quantitative reasoning, and reserve that step for yourself.

#### 8 Verify AI outputs

Check claims, calculations, currency, and bias. AI can invent convincing references, so confirm that every source exists and read it.

#### 9 Own your work

Submit only work you can explain and defend, including each argument, calculation, and design decision.

### ETHICS & INTEGRITY

Is my own contribution honestly and clearly represented?

#### 2 Disclose your AI use

Include a brief AI-use statement naming the tool, the purpose, and how you changed the output. Disclosure is normal practice, not an admission.

#### 3 Avoid misrepresentation

Do not submit AI-generated text or code as your own, and do not use AI in ways the course prohibits. If AI-assisted content is permitted, revise, integrate, and disclose it as required.

#### 6 Set team AI norms

In group work, agree at the outset which uses are allowed, how they will be recorded, and how each member's contribution will be described.

### AWARENESS & SAFETY

Is the output, and what I typed in, safe to rely on?

#### 5 Protect privacy

Do not enter personal, confidential, proprietary, or identifying information. Protect sensitive information and use institutionally approved tools when required.

#### 7 Confirm course expectations

Rules differ by instructor, course, and assessment type. Check the syllabus and assignment instructions first. If expectations remain unclear, ask your instructor before using AI.

#### 10 Stay current

Tools and policies change faster than syllabi. Recheck course and institutional guidance each term.

### WRITING AN AI-USE STATEMENT

Name the **tool**, the **purpose**, and **what you did** with the output.

**Example:** "I used [tool] to generate practice questions on Chapter 4 and to check the structure of my argument in Section 2. I wrote all submitted text myself, and I located and read every source cited."

### BEFORE YOU SUBMIT

- ☐ I can explain and defend every part of this work.
  - ☐ I verified what AI contributed, including all sources.
  - ☐ I disclosed my AI use as required by the course.
  - ☐ I entered no sensitive or identifying information.
- If expectations are unclear, ask your instructor before you submit.
